Subject: Role of epi data in OPP's human health risk assessments
Attachments: Summary of use of epi general_May222017.docx; Summary of use of epi for cpfosops_May222017 .docx

Nancy—

Recently, you asked for some background information describing the role of epidemiology data in OPP's human health risk assessments. To address this request, we have developed the attached two papers: one is specific to chlorpyrifos and the organophosphates, providing some detail on the advice that we have received from three different SAP panels; the second is more general in nature, but also highlights some additional examples where epi data have been a key component of the risk assessments for specific chemicals.

Please let us know if you have any questions.
